Product Goals

- _ Provide appropriate information to the user to help them make right & quick financial decisions

INSTRUMENTALS

Pravivideo

High traffic screen in the app where the expert customer makes the decision to open, close or amend a position.

the fact that the *de facto* standard of living is not the same as the *de jure* standard of living. The *de jure* standard of living is the standard of living that would obtain if the economy were in a steady state.

There are two ways in which the *de jure* standard of living can be higher than the *de facto* standard of living. First, the *de jure* standard of living can be higher than the *de facto* standard of living if the economy is in a steady state and the *de facto* standard of living is lower than the *de jure* standard of living. Second, the *de jure* standard of living can be higher than the *de facto* standard of living if the economy is in a steady state and the *de facto* standard of living is higher than the *de jure* standard of living.

INSTRUMENT DETAILS

High traffic screen in the app where the expert customer makes the decision to open, close or amend a position.

Customer Goals

- Understand the current market
- Easily access and read critical information, while on the move

Product Goals

- Provide appropriate information to the user to help them make right & quick financial decisions

Challenges

- Large amount of different data with similar priority
- Constantly changing multiple pieces of information
- Design to avoid fat-fingering errors

INSTRUMENT DETAILS

Design Wins & Innovations

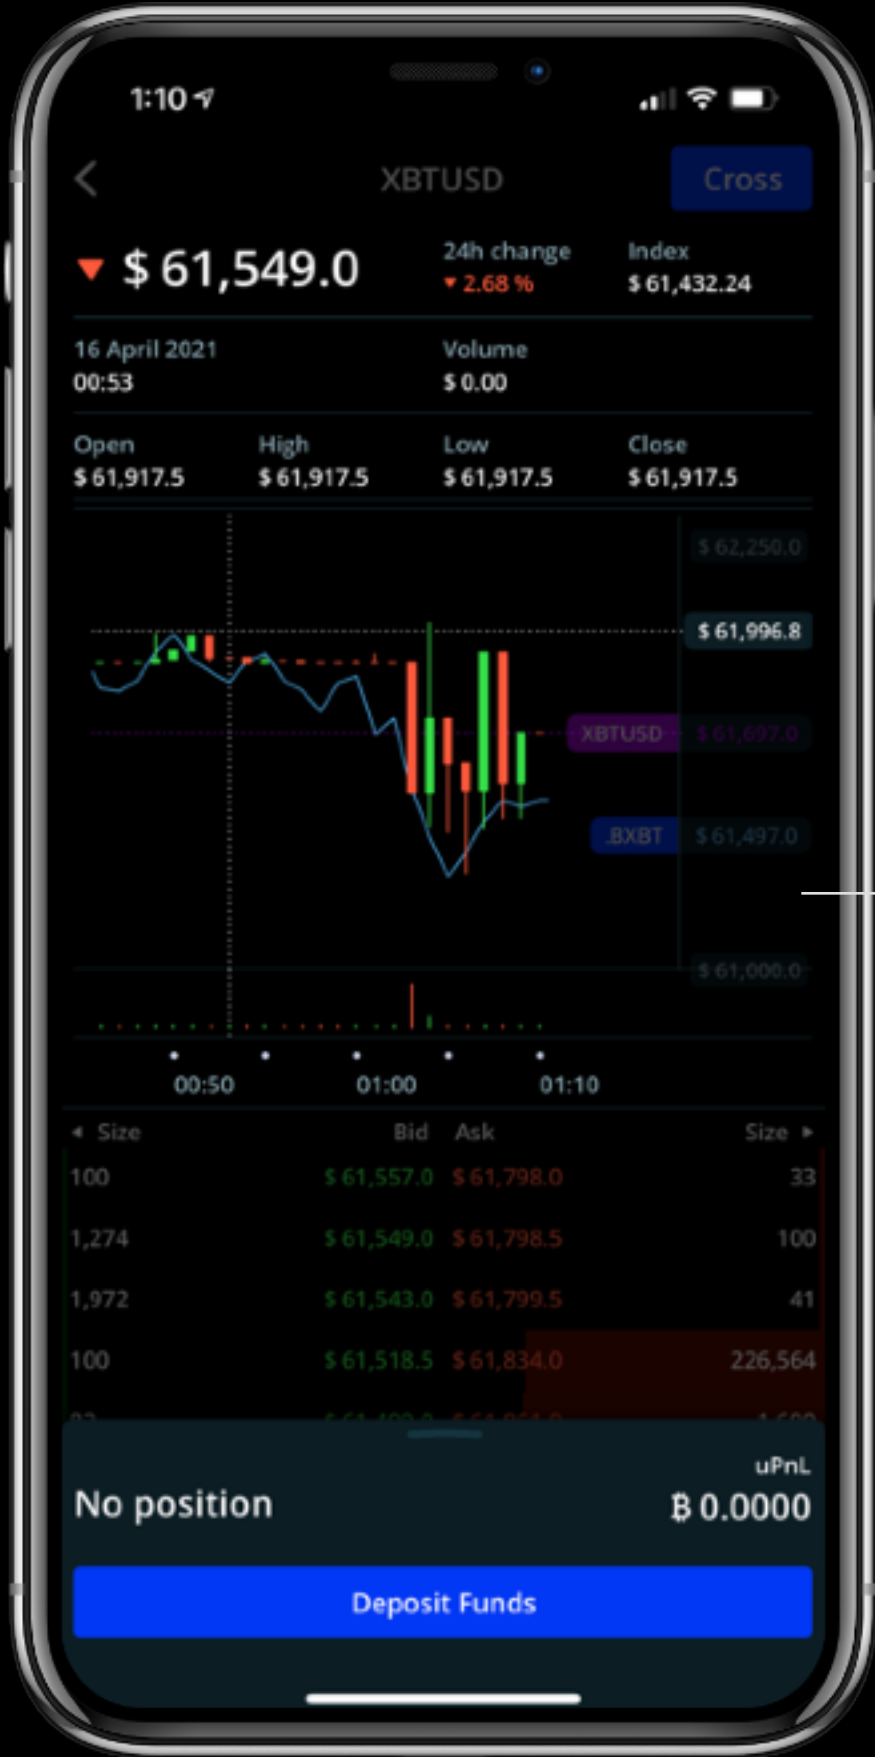

Necessarily Complex

High Information Density but still readable on quick glance

Custom designed Candlestick chart with personalized markers

Constantly updating order book with progressive disclosure.

Constant activity reflected on screen with subtle yet prominent animation

Candlestick chart stub state reveals further OHLC info while graying out the screen to help user focus on critical information
